Art Unit: 3736

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Applicant discloses using a magnetic apparatus to apply a magnetic energy to an acupressure point. However it is unclear how the reflector would converge the magnetic energy to the focal point. Reflectors are used to focus propagated waves, while a permanent magnet possesses no propagated waves, it is unclear how the parabolic reflector would in any way affect or focus the magnetic energy from the body to the focal point.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kim, Guo, Chang, Cheng and Isaacson are cited to further show the state of the art of magnets applied to acupressure points.
